Group Challenge

Group Challenge

- In this group challenge, we will divide into small groups of approximate 2 to 3 students in each group.
- Each group will work together to solve the challenge question.
- You will spend about 30 minutes for the challenge and then each group will present their answer by screen sharing.
- The goal of this challenge is to enhance your skills in coding, research, problem solving, team collaboration and presentation.
- Codepen link is provided for this challenge. Please fork before making any code changes.

  https://codepen.io/rloke/pen/GRvOpGY

- You are only required to work on the JS window. You do not need to change or add anything in the HTML and CSS windows.

Group Challenge

- On this challenge, you are task to make the controlled form work.
- If you notice around the codes, there are numbered tasks assigned ie. task 1, task 2, etc. Follow these task numbers to complete the challenge.
- Because this will be a controlled form, that means we are saving, update and retrieving data from a local state. These states data are already setup in the class.
- There are also three event handlers already setup to handle events from the controlled form ie. when user enter text, select from a dropdown menu and submit the form. These three handlers are located within the class component.
- At this time, the controlled form is not part of any component. It should be. This form will be in separate functional (child) component name *OrderForm*. This function will be rendered in the class (parent) component in which its basic structure is already setup.
- Keep this in mind: data in a parent component can be passed to child component(s) as *props* through rendering of the child component(s) within the parent.

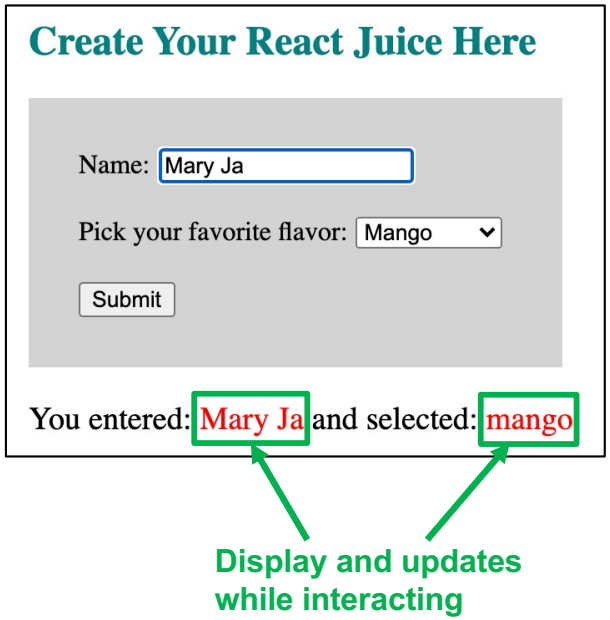

Group Challenge

- Here are snapshots of the controlled form interactions:

When first load

While filling/selecting

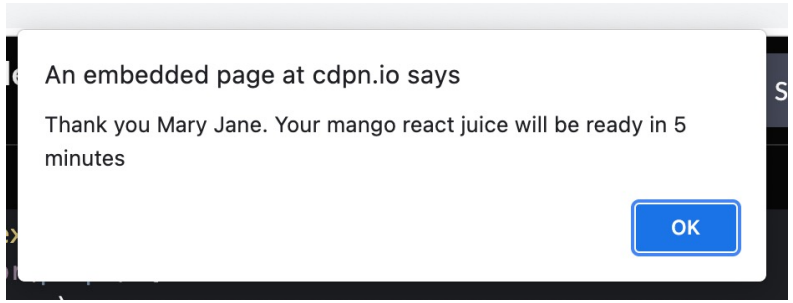

Group Challenge

After clicking submit button

Group Challenge

- Each group to share their solutions using share screen.
- Show your codes on Codepen.
- Presenter:

  Explain your approach including code concepts used.
